

#### The specialist in movement control

Somfy is known in 70 countries in the field of automatic control and operation of building functions.

The success of Somfy is based on three principles: service, quality and innovation.

The international expansion quickly took off with the development in 1966 of the first tubular motor for sun blinds. The high quality and reliability of each motor delivered led to sustained worldwide demand for this type of Somfy product. Five million tubular motors are currently produced each year.

Somfy has meanwhile developed into a market leader in automatic control systems and electrical controls for external and internal sun blinds.

#### Our expertise at your service

The technical expertise of Somfy is permanently available to architects, consultancies, systems integrators, project suppliers, sun blind specialists and professionals in the building sector. Many professional service providers in the construction world already benefit regularly from our knowledge and experience.

The skilled specialists from Somfy would be pleased to help you with:

- advice
- attendance at (construction) meetings
- supplying custom-made offers
- technical support
- accompanying shutters, electrically operated (roof) windows and domes.

## Electrical operation of curtains

Application in offices, hotels and healthcare

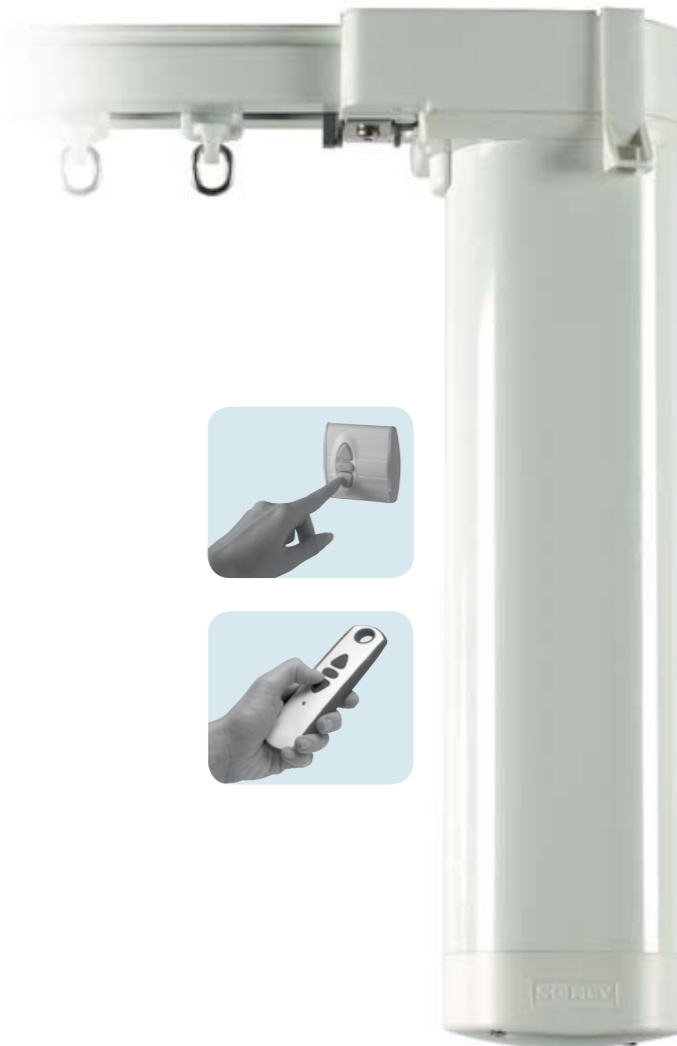

**somfy**

## THE COMFORT AND EASE OF ELECTRICALLY OPERATED CURTAINS

How about dimming the light in the meeting- or presentation room at the press of a button? Or the patient or resident operating the curtains in bed? The electrical curtain rail from Somfy makes it possible. A plus point for hotels and modern offices. Ideal for geriatric care, hospitals and other care institutions.

The Somfy electric curtain track is a quality product that will deliver many years of service. The small low noise motor operates the curtain in a smooth and even manner. You no longer need to get up and walk over to open and close the curtains. This is handy for hotel guests or during meetings and is ideal for patients, residents and staff. The system is operated by a wall switch or remote control.

## THE ADVANTAGES OF ELECTRICAL OPERATION

- A press on the button is enough to quickly open or close the curtains.
- It is possible to operate one curtain separately or several curtains at the same time.
- It has a low noise trouble free motor.
- The curtain can still be opened and closed manually.
- It can be combined with bus systems, Domotica systems or patented RTS technology.
- Option: automatic operation via time- or sun function.
- The motor can be placed on the left or the right.
- Other internal and external sun blinds can also be used with the same remote control.

## POSSIBILITIES FOR USE

### Switch

One or more curtains can be used at the press of a button. Delivery is possible as a wireless design.

### Remote control

Available in various designs. Just one remote control for several curtains or several remote controls for one curtain.

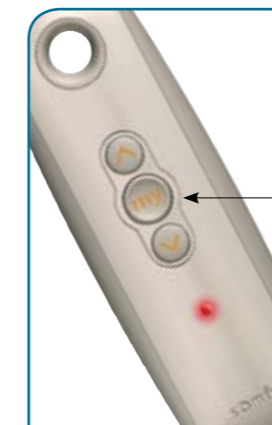

### Façade management systems

The electrical curtain rail by Somfy can be combined with several Somfy façade management systems (e.g. Animeo, IB bus).

### Radio Technology Somfy™

This stands for a worldwide standard in safe and reliable wireless operation by way of high frequency signals. It is applied in more than seventy countries. It has a transmission range of at least 20 meters in and around the building. To sum up: there are much less cables, it is guaranteed to work and it offers more flexibility.

### (my) preferred position

By briefly pressing the middle button on the remote control, the curtain closes partially up to a pre-set position.

## FOR SEVERAL AREAS OF APPLICATION

### OFFICES

- **Businesses / government / industry**

Meetings are held in meeting rooms or management offices. The presentation begins. The curtains close at the press of a button, the projector drops from the ceiling and the projection screen is lowered. Electrically operated curtains and other applications facilitate daily work. This increases the modern image of the presentation room and the management offices.

### HOTELS

- **Hotels / seminar rooms / holiday complexes**

Hotel guests experience extra comfort with curtains operated via remote control or a switch. The curtains can also still be opened or closed manually. It is nice when guests do not initially realize that this is also possible via remote control. An electrical curtain track is a great solution for very quickly creating the desired atmosphere and light incidence.

### GERIATRIC CARE

- **Nursing homes / geriatric clinics / pensioners' complexes / sheltered accommodation**

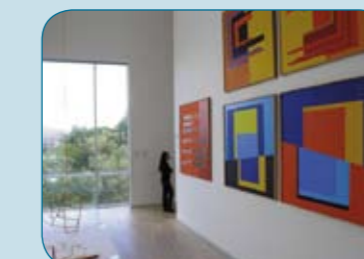

More ease and comfort for patients and residents, less work for care personnel. It is even possible – while still in bed – to operate the curtains via a switch or a remote control without having to call for help. It is still possible to open and close the curtains manually.

### HOSPITALS & OTHER CARE INSTITUTIONS

- **Hospitals / rehabilitation centres / treatment centres & convalescent homes / day centres for the disabled**

During a stay in a hospital or a care institution, a pleasant, homely atmosphere has a demonstrable and positive influence on recovery and well-being of patients and residents. Curtains can contribute to this, particularly if they can be simply opened and closed via a switch. This also applies for other internal and external sun blinds.

### PUBLIC BUILDINGS

- **Local government offices / conference halls / theatre foyers / museums**

Electrically operated curtains are also handy in areas difficult to reach in buildings such as high windows and ceilings. As well as the freedom of operation, moreover a stylish, chic ambience is created. The result is a positive influence on the conditions of the stay.
